ODOffice Pro Update Guide

This document provides details for updating your ODOffice Pro system.

Periodically, updates will be made available for the ODOffice Pro application. These updates may include bug fixes, feature enhancements, or new features. To simplify the update procedure, the required steps are actually built into the product. The user simply needs to follow the instructions presented by the program. When completed, any updated files will have been downloaded immediately from the SpinnakerWare server over the Internet.

The update procedure should take only a few minutes, but the server will be unavailable during this time, and therefore the update should only be performed during a break, or outside of office hours. Although having clients running will not impact the first part of the update, these clients will be unresponsive, and must be restarted after the update anyway, so it is a good idea to **have all clients logoff before starting**.

Server Update

The update process is initiated from the server program.

With most modern Windows systems, the internal security will prevent programs from launching other programs, or updating themselves. This is a good thing, as it helps protect us from viruses. But when we WANT a program to be allowed to do this, we must inform Windows. We do this by running the program "as Administrator".

THIS IS THE CRITICAL FIRST STEP:

Before beginning the update process, please **close the server program**. Next, go to the desktop icon for **ODOfficePro Server**, and **right-click on it**, **then choose** *Run As Administrator*.

The Windows system may pop-up a window to ask you to confirm that you would like to allow this. If it does, then select the appropriate affirmative response. Your server program will then be running.

If you skip this step, you will likely be unable to complete the update!

		Connect	Shutdown

Now, before actually performing the update, it is useful to check the version of the software that is currently running. You can do this by selecting *About ODOfficePro Server*... from the Help Menu.

🛞 OD Office Pro - Server	
File Tools Data Help

Time:	
Connect	Shutdown

This will show you the current version.

OD Office Pro	
OD Office Pro Server	
ver. GA 3.0, rev. 1	
905.304.3526	
www.SpinnakerWare.com	
(c) SpinnakerWare Inc., 2009.	

The first step in performing the update is to download the update files from the SpinnakerWare server. To begin this process, the user selects the *Check for Updates*... option from the Tools menu.

00	D Office Pro - Server	
File	Tools Data Help	
Ad	Apply Database Patch Check for Updates	
C La	Subris Error Report Turn on SQL Logging Log Client Requests Internet Support	
	Import Patients	
	Change IP Address Restore Database	
		Connect Shutdown

Clicking on this will open the ODOffice Pro Auto-Updater.

As instructed, pressing the *Download Updates* button will cause the Auto-Updater to look for updates.

IMPORTANT: You MUST click on *Download Updates*, even if the *Install Updates* button is already highlighted. The download is required to obtain the latest version.

If an update is available, pressing the *Yes* button when prompted, will inform the program that the update should be downloaded.

Any server and/or client updates will then be downloaded from the SpinnakerWare server. This step may take up to about a minute, depending on the user's available Internet speed.

🕿 Please Wait		
	Downloading server update	
S Please Wait		
	Ν	
	Downloading client update	

Once the files have been downloaded, the Auto-Updater window again appears, but this time the message indicates that an update has been downloaded, and is ready to be installed.

Once the *Install Updates* button is pressed, the user will likely see 2 windows appear briefly, which indicates that the update is being unpacked.

The following two windows indicate that the update files have been successfully unpacked.

Informa	ation 🛛 🔀	
(j)	いて Client updates have been applied successfully.	
	ОК	
Confirma	ation Required	
Commin	adon required	
2	A Server update is ready to be applied, but OD Office Pro	Server must shutdown to do this. Would you like to proceed?
	Yes	No

When the user clicks the *Yes* button on this window, the server program will automatically shutdown, so that the program files can be updated. The following window should appear briefly, indicating that the server files are indeed being copied into the program folder.

Once this window closes, the server part of the update procedure should be completed, and the user can now restart the server program normally (ie. just double-clicking on the desktop icon...there is no need to *Run as Administrator* again)

If you do NOT see this window, or you get a message informing you that the Update Program can not be launched, then your server program did not have sufficient rights to proceed. At this point, close the server program, and start again, remembering to *Run as Administrator*, as described above

Database Update

Frequently, an update to the database will also be required. Usually this is to create space for new information being saved.

Whenever the server program is started, part of its duties is to verify that the database version matches the server version. If there is a mismatch, then the database update procedure is launched automatically.

After completing the server update as outlined in the previous section of this guide, and restarting the server, the following message may appear, indicating that the database needs to be updated.

Confirm	ation Required	×
?	k_{c}^{\star} The database must be upgraded before continuing. This make take up to several minutes. Would you like to procee	:d?
	Yes No	

Pressing the *Yes* button will launch the Database Migrator, and any updates or changes to the database that are required will be made automatically.

🐼 Database Migration	
Current Database Version: 2.8	
** Migrating database to version 2.8 rl 0 **	
No new tables were created. Creating columns. No data was changed. No columns were removed. No tables were removed. Updating Database Version to 2.8 r1.0 Database migration committed successfully ** Migration succeeded **	~
	>
View SQL	Done

Once completed, the user will be informed. Pressing the *OK* button will dismiss the message.

The Database Migration window will still be open in the background, but can be closed at this point, by pressing the *Done* button.

Once this database update is complete, no further steps are required at the server. The server program will now be running, and the user can now restart each of the client programs, which will copy the appropriate update files from the server as each one logs in. The Client update procedure is described in the next section.

If there is NO database update, then it is a good idea to verify the update has in fact taken place. The easiest way to do that is to check the server version again. It should be different than when the process was started.

If the version has not changed, then the update has failed.

The main cause of such a failure is almost always the security settings on the computer. To update files, the program must have administrator privileges. If the computer is setup to disallow these actions, then the final part of the update will not be allowed to proceed.

The quickest way to overcome this is to close the program, then start over, remembering to *Run as Administrator*, as described above.

Client Update

The following procedure must be performed at each of the client computers. It is also advisable to update the client software on the server computer as well.

Please make sure the client software is closed before starting.

As with the server program, the client program must also be allowed to update itself, and therefore also requires the extra rights that are granted by running it "as Administator". The client program must be started by right-clicking on the desktop icon for **ODOfficePro Client**, then choosing *Run As Administraor*.

The Windows system may pop-up a window to ask you to confirm that you would like to allow this. If it does, then select the appropriate affirmative response. Your client program will then be running, and the user simply logs on as normal.

When an update has been downloaded by the server program, the client program will show the following screen. The user must press the *Yes* button.

Confirmation Required				
?	There is a newer version of the client software available. Would you like to perform the update now? If no, then the logon will be cancelled.			
	<u>Yes</u> <u>N</u> o			

This will first copy the required files over from the server computer. The user must press OK to continue.

Note: the number of files copied will change, depending on what is included in the update.

Information 🛛 🔀
3 file(s) copied
OK

Assuming the files are transferred successfully, the client program will then need to shutdown, in order for the program files to be updated. Pressing *Yes* on the following window will cause that to happen.

Confirm	ation Required
?	A Client update is ready to be applied, but OD Office Pro Client must shutdown to do this. Would you like to proceed?
	<u>Y</u> es <u>N</u> o

The client program will then shut itself down, and a black window will appear briefly, indicating that the update is proceeding. When that window closes, the client software can be restarted as normal, and will be running at the latest version.

If, when the program restarts, the message indicating a new version is available shows up again, then the most likely reason is that Windows denied the copying of the files due to insufficient privileges. The solution is to hit *No*, then close the client program. Then start the Client Update over, remembering to *Run as Administrator*, as described above.

Another cause of failure when updating a client, is that the client software is still running. You should check to see if there is another copy of the client running, and if so, close it. Then start again by launching the client using *Run As Administrator*.

If all else fails, trying to update the Client, there is also an option to simply reinstall it, directly from our website. There is no need to uninstall anything first, or perform any kind of preparation....other than to ensure the software is not running.

To reinstall the software, go to our support page (<u>https://www.spinnakerware.com/support.html</u>), and click on the link for the *Client Installer*, in the **Downloads** area. Once this has completed, select *Run* or *Open* from the browser's options.

Security on the computer will likely ask to confirm the action.

Once the Installer is running, you need only click on *Immediate Installation*. When it finishes, it will say THANKS!

To find out what is new, or has been changed, all users should read the revision notes, available by clicking *Revision Notes*... under the Help menu of the main client Launchpad window. This will open a window describing all changes/additions/fixes that have been made in each update.
